Note:

C1: C1 is used as filter capacitor with AC input and as EMC filter capacitor with DC input;

R1: R1 is a 12Ω/2W current limiting resistance;

An external input NTC (13D-5) is recommended for inrush current limitation and an external MOV (S14K350) for transient suppression.

Output filter: We recommend using an electrolytic capacitor with high frequency, high ripple current and low ESR rating for C2 and C3 refer to manufacture's datasheet). Combined with L1, they form a pi-type filter circuit. Choose a Capacitor voltage rating with at least 20% margin, in other words not exceeding 80%. C4 is a ceramic capacitor, used for filtering high frequency noise. A suppressor diode (TVS) is a recommended to protect the application in case of a converter failure.
