

PWA_CS-2W & PWB_CS-2W Series 2W, ULTRAWIDE INPUT, ISOLATED & REGULATED DUAL/SINGLE OUTPUT, DC/DC CONVERTER

Patent Protection RoHS

PART NUMBER SYSTEM

FEATURES

1. High Efficiency up to 79%
2. I/O Isolation 1500VDC
3. 4:1 wide input range
4. Short circuit protection(automatic recovery)
5. Operating Temperature: -40°C to +85°C
6. Remote ON/OFF control
7. Internal SMD construction
8. UL94-V0 package

APPLICATIONS

The PWA_CS-2W & PWB_CS-2W Series are designed for application where a wide range input voltage power supplies are isolated output is required from a distributed power system.

These products apply to where:

- 1) Input voltage ranges $\leq 4:1$;
- 2) 1.5KVDC input and output isolation;
- 3) Regulated and low ripple noise is required.

TEST CONFIGURATIONS

Input Reflected-Ripple Current Test Setup

Input reflected-ripple current is measured with an inductor Lin and Capacitor Cin to simulate source impedance.

DESIGN CONSIDERATIONS

1) Requirement on output load

To ensure this module can operate efficiently and reliably, During operation, the minimum output load is not less than 10% of the full load, and this product should never be operated under no load! If the actual output power is very small, please connect a resistor with proper resistance at the output end in parallel to increase the load, or use our company's products with a lower rated output power.

2) Overload Protection

Under normal operating conditions, the output circuit of these products has no protection against overload. The simplest method is to connect a self-recovery fuse in series at the input end or add a circuit breaker to the circuit.

3) Recommended Circuit

If you want to further decrease the input/output ripple, an "LC" filtering network may be connected to the input and output ends of the DC/DC converter, see (Figure 5).

However, the capacitance of the output filter capacitor must be proper. If the capacitance is too big, a startup problem might arise. For every channel of output, provided the safe and reliable operation is ensured, the greatest capacitance of its filter capacitor must less than the Max Capacitive Load.

General: C1/C2:10-100 μ F
Cout:100 μ F
Lin:4.7-120 μ H

(Figure 5)

4) TRL Terminal

When open or high impedance, the converter work well; When this pin is 'high'; the converter shutdown; It should be note that the input current should between 5-10mA,exceeding the maximum 20mA will cause permanence damage to the converter. The value of Vc not limited and desirable 5VDC, 12VDC, or directly with Vin. The value of R can be derived as follows:

$$R = \frac{V_C - V_D - 1.0}{I_C}$$

5) Input current

When it is used in unregulated power supply, be sure that the fluctuating range of the power supply and the rippled voltage do not exceed the module standard. Input current of power supply should afford the flash startup average current of this kind of DC/DC module (Figure 7).

General: Vin:24V Iave =426mA
Vin:48V Iave =213mA

(Figure 6)

6) No parallel connection or plug and play.

Note:

1. Recommend to use module with more than 10% load, if not, the ripple of the product may exceeds the specification, but does not affect the reliability of the product;
2. Max. Capacitive Load is tested at input voltage range and full load.
3. All date in the datasheet are measured according to nominal input voltage, rated output load, TA=25 $^{\circ}$ C, humidity<75%, unless otherwise specified.
4. In this datasheet, all the test methods of indications are based on our corporate standards.
5. The performance in the datasheet is just fit for the part number in the selection guide, and may be different from the customer-designed product, you can get more details from MORN SUN FAE.
