Notes :

①: ***Pad types : I = input , O = output , I/O = input/output (bidirectional) ,***
AP = Analog Power , AG = Analog Ground
DP = Digital Power , DG = Digital Ground
A = Analog

②: ***Output Drive strength is configurable, it's the suggested value in this table. Unit is mA , only Digital IO have drive value***

③: ***Reset state: I = input without any pull resistor O = output***

④: ***It is die location. For examples, "Left side" means that all the related IOs are always in left side of die***

⑤: ***Power supply means that all the related IOs are in this IO power domain. If multiple powers are included, they are connected together in one IO power ring***

⑥ ***The pull up/pull down is configurable.***
